Summary of Experience

Data Analyst with 4 years of experience in analytics and visualization, currently advancing skills through an MS in Data Science. Proficient in SQL, Python, Power BI and statistical methods to create interactive dashboards and timely reports. Demonstrated success integrating survey and CRM data to produce actionable insights for stakeholders. Strong communicator skilled at translating complex findings for both technical and non-technical audiences.

Skills

- **Programming Languages:** Python, R Studio, SQL, DAX
- **Data Visualization Tools:** Power BI, Tableau, Advanced Excel (Pivot Tables and Power Query)
- **Applications & Platforms:** Salesforce CRM, Power BI Service, JIRA, Balsamiq and Visual Paradigm, VS Code
- **Databases:** Microsoft SQL

Certifications

- **Microsoft Power BI Data Analyst Associate: May 2024**
- **Data Analytics Essentials: University of Texas at Austin, McCombs School of Business (May 2024)**
- **Certificate in Business Analysis: Techno Canada Centre of Excellence (2020)**
- **Salesforce Sales Consultant Certification: 2020**
- **Salesforce Administrator: 2016**

Projects

Jan 2025 - Mar 2026

Movie Recommendation System (Apache Spark & Databricks)

- Developed a scalable recommendation engine using ALS Collaborative Filtering on a dataset of 20M+ ratings.
- Optimized a distributed ML pipeline to manage 3.7B possible user-movie interactions, achieving an RMSE of 0.8159.
- Leveraged Spark MLlib to perform matrix factorization, learning latent features for 138k+ users to generate Top 5 personalized recommendations.

Urban Thermal Regime & Warming Trend Analysis (K-Means clustering and Linear Regression)

- Applied K-Means Clustering to a Berkeley Earth dataset of major global cities to identify 4 distinct urban thermal regimes based on temperature variability.
- Engineered 26 temporal and geospatial features, including latitude-based segmentation, to analyze structural heterogeneity in temperature dynamics.
- Conducted Linear Regression to estimate warming rates, discovering that Hot-Variable regimes are warming at 0.10°C per decade—nearly twice the rate of colder regimes.
- Delivered actionable insights on urban heat risks, highlighting how land-surface transformation in rapidly urbanizing regions accelerates local warming.

NYC Waste Diversion & Sustainability Analytics (Tableau)

- Synthesized 10 years of DSNY and Census data (2013–2023) to visualize borough-level disparities in waste generation and diversion performance.
- Architected an interactive Tableau storyboard to identify "recycling gaps" and seasonal waste patterns, uncovering specific underserved areas for municipal intervention.
- Leveraged data storytelling to translate complex sustainability challenges into actionable insights for targeted, data-driven service accessibility improvements.

University Enrollment Relational Database (SQL)

- Engineered a robust relational database in 3rd Normal Form (3NF) to manage academic records, ensuring 100% data consistency and eliminating redundancy.
- Designed a complex ER Schema featuring 1:M and M:N relationships to support cross-listed courses, faculty assignments, and student enrollments.
- Implemented Referential Integrity constraints and Primary/Foreign Key architectures to maintain a scalable and high-performance DBMS structure.

Starbucks: Digital Transformation & Operational Strategy (Python & Tableau)

- Engineered a multi-dimensional analytics framework to evaluate the impact of digital transformation and loyalty programs on Starbucks' global revenue and post-COVID recovery.
- Analyzed customer offer engagement across diverse demographics using Python, identifying key behavior patterns to optimize offer personalization and loyalty retention.
- Conducted a data-driven sustainability audit, benchmarking GHG emissions, waste diversion, and reusable cup adoption

against 2030 corporate targets.

- Developed interactive Tableau dashboards to visualize regional financial trends, providing strategic recommendations for operational efficiency and sustainability acceleration.

Automotive Fuel Efficiency Predictive Modeling (Python, R, & Tableau)

- Engineered a comparative analytical framework using Python and R to evaluate the impact of engine specifications on fuel efficiency (MPG) for the Auto MPG dataset.
- Developed and optimized Multiple Linear Regression models on 300+ training samples, achieving high predictive accuracy validated through R-squared metrics.
- Conducted rigorous model validation on a 98-sample test set, utilizing residual analysis and error metrics to ensure statistical reliability.
- Designed an interactive Tableau suite to visualize exploratory data patterns, translating complex regression outputs into a stakeholder-ready final report.

NYC Food Scrap Accessibility & Geospatial Analysis (Python & Power BI)

- Analyzed the spatial distribution and operational efficiency of 591 food scrap drop-off locations using NYC Open Data.
- Engineered a geospatial analysis pipeline in Python to identify "service deserts" and accessibility gaps in borough-level composting infrastructure.
- Architected an interactive Power BI dashboard visualizing site density and operational availability, providing data-driven recommendations to improve municipal waste diversion.
- Synthesized complex operational patterns to identify underserved neighborhoods, directly supporting long-term sustainability and composting equity goals.

Work Experience

Synergy Technofin Pvt. Ltd.

Data Analyst | Power BI Developer

Jun 2024 - Nov 2024

The project was to generate actionable insights from farmers survey data across 11 states in India, analyze key agricultural trends and identify areas for improvement to enhance productivity and efficiency.

- Created and maintained interactive Power BI dashboards using Python for data transformation and Microsoft SQL to enable stakeholders to extract actionable insights from large datasets.
- Conducted DAX calculations to optimize reporting functionality, producing new measures, columns, and tables.
- Improved data quality by cleaning, merging, and validating datasets from various agricultural sources for precise analysis.
- Partnered with cross-functional teams to integrate survey data, enhancing the accuracy and reliability of insights for decision-making.
- Delivered detailed reports and presentations to management, communicating complex findings and trends to non-technical stakeholders for process improvement.

Bolkris Solutions, Toronto

Data Analyst | Admin

Toronto · Oct 2019 - Jul 2022

- Analyzed data from Salesforce CRM, providing insights to optimize sales and operational processes.
- Customized Salesforce to meet user requirements and generated reports and dashboards in Tableau to support data-driven decision-making.
- Worked on SDLC phases, including analysis, requirement gathering, testing, and deployment, ensuring alignment with business objectives using Agile methodology.
- Utilized advanced Excel functions (VLOOKUPS, pivot tables) and Power Query to generate detailed and operational reports.
- Collaborated with Sales and IT teams to integrate data into client workflows, enhancing accessibility and supporting strategic initiatives.

CRM Consultant

Toronto · Feb 2016 - Apr 2017

- Managed and customized CRM systems (Zoho and proprietary solutions), enhancing lead capture and sales process efficiency.
- Developed dynamic dashboards and custom reports to provide actionable insights to sales and marketing teams.
- Implemented data management processes, ensuring data integrity through migration, deduplication, and validation efforts.
- Supported the integration of web-to-lead forms, improving lead management and conversion tracking.
- Used Uplead Salesforce connector to export Accounts and Contacts data from Uplead directly to Salesforce Accounts and Contacts.
- Used MS Office tools extensively to report on salesforce data with Excel.
- Worked on vCita Scheduling App Utilization.

Bell Media, Toronto

Data Administrator (SAP)

Toronto · Jan 2015 - Jun 2015

- Monitored and resolved workflow errors in SAP Business Workplace for TS Group managers to ensure smooth financial operations.
- Coordinated with vendor representatives for quotes, status and invoice updates.
- Created purchase orders for capital and operating budgets for several departments

- Worked on accrual reports for finance on a monthly basis
- Created and maintained financial budget and cash flow reports for projects on a monthly/quarterly basis.
- Created accrual reports for finance on a monthly basis.

Synergy Technofin Pvt. Ltd.

Agri-Business Manager

New Delhi · Oct 2011 - Mar 2013

- Conducted financial analysis and developed strategic business plans.
- Managed monitoring and evaluation projects for various government schemes.
- Developed detailed project reports, feasibility studies, and value chain analyses of diverse agriculture and allied sectors.
- Handled business development and proposal preparation.

Indian Society of Agri-business Professionals

Assistant Project Manager

New Delhi · Jul 2010 - Sep 2011

- Managed India Certified Crop Adviser Program (CCA Program).
- Developed marketing tools and coordinated marketing activities.
- Pro-actively worked to identify the organizations which provide funding for carrying out training programs and establish communications with such organizations.

Global AgriSystem Pvt. Ltd.

Assistant Manager

New Delhi · Sep 2007 - Jun 2010

- Prepared feasibility reports and business plans on diverse agriculture and allied sectors.
- Managed project needs, resource planning, scheduling of tasks, budgeting, project monitoring, data mining, data analysis, reporting, preparation of layouts and MIS.
- Assisted clients with business planning, applications and new business ventures.
- Evaluated schemes launched by various departments under Ministry of Agriculture
- Organized events, presentations, demonstrations, imparting training with specific issues and developments in the agriculture and agribusiness sector
- Liaised with stakeholders in agribusiness value chains.

Sutlej Agriculture Pvt. Ltd.

Assistant Manager

New Delhi · Oct 2005 - Aug 2007

- Directed and monitored farm operations for contract farming of vegetable crops in farms spread over 1000-1500 acres with frequent field visits.
- Developed systems for data recording and maintenance. Crop harvest forecasting for preparation of harvesting and delivery schedule.
- Consolidated harvest tracking, input productivity monitoring for quality and productivity enhancement.
- Responsible for Compliance with Package of Practices for various crops, timely Integrated Pest Management, supervised export quality of harvesting for delivery to Pack House.
- Implementing and supervising traceability systems, packaging and labeling guidelines, quality and residue control (GAP, GlobalGAP and HACCP) to international standards.
- Responsible for developing produce costing, operation analysis and farm expenses.
- Ensured compliance with quality standards and GAP practices.
- Planning for forthcoming crops, setting agendas and monitoring activities at the farms
- Coordinated with packhouses, local markets and customers.
- Liaised with the Marketing Department for domestic sales of produce to different mandis.
